

5G IS A DEADLY KILLER

Information from ex naval and industry personnel, concerned medical professionals, and observers where it is already installed.

It adds military grade microwave weapons technology to the existing 4G wireless wavelengths.

Microwave shocks are used by militaries for crowd control (burns skin and eyes)

DOCUMENTED LEVELS OF DAMAGE FROM EXISTING WI FI NETWORKS

Marked increase in Alzheimers, Dementia and Brain tumours: Thyroid, throat and breast cancers. Suspected in prostate and ovarian cancers.

Rise in Autism and in mental health problems: More suicides in young men: more self harm in young women.

Now we have short microwave 5G technology, which requires thousands of small antennae, at frequent intervals. It doesn't work well through foliage, hence the programme to cull our mature urban trees. Already started without consultation in UK. Look up Sheffield and Gateshead Councils, also Worcester, and check out the Brighton research centre. Alert your neighbours.

THE AGENDA IS FOR FULL ROLLOUT BY 2020.

Antennae on many lampposts, (the harmful effects are increased in combination with LED lights) outside the kids' bedroom, on street corners, walls of pubs, offices, in sports grounds, in schools (it affects childrens' small brains more than adults) everywhere, including smaller versions inside your home; in every smart TV and appliance.

Low levels of Electro magnetic frequencies are cumulatively harmful, (from the electric circuitry surrounding every room in your house) and in combination with existing wi fi have caused the damage to health described above.

Now, with 5G, microwave technology is damaging DNA in humans and animals more rapidly.

Expected are more cancers, more mental problems, less brain power: More stillbirths and damaged fetuses (already observed in Gateshead UK)

In a couple of generations this will result in DNA damaged beyond repair. Birds and insects have already gone from some places.

And that's before we consider the potential for surveillance: of every person: in home, school or work place (these antennae both transmit and receive)

LOOK UP THE FACTS for yourself and listen to some experts in short wave military weapons and electronics technology
